

Name _____ Period _____ Date _____

HANDOUT 7B-1

1. T or F

Fact or Falsehood?

2. Page # where answer is.

3. Evidence to support whether its T or F

- | | |
|-----|--|
| T F | 1. People more easily detect male prejudice against females than female against males or female against females. |
| T F | 2. Humans are the only creatures to display insight. |
| T F | 3. Exceptionally creative architects, mathematicians, scientists, and engineers usually score no higher on intelligence tests than do their less creative peers. |
| T F | 4. We all have a tendency to approach a problem with the mind-set of what has worked for us previously. |
| T F | 5. In general, people underestimate how much they really know. |
| T F | 6. It takes less compelling evidence to change our beliefs than it did to create them in the first place. |
| T F | 7. People are more likely to be afraid of snakes, spiders, and heights than they are of driving in a car, even though driving is much more dangerous. |
| T F | 8. The babbling of an infant at 4 months of age makes it clear whether the infant is French, Korean, or Ethiopian. |
| T F | 9. Many bilinguals report that they have different senses of self, depending on which language they are using. |
| T F | 10. Imagining a physical activity triggers action in the same brain areas that are triggered when actually performing that activity. |
